To whom it may concern:

Our US branch has been closed recently I have been laid off as the Qualifying Architect of a 50 person A/E firm in Orlando. I have 10 years experience in Architecture. I most recently was the Vice President of Architecture at Ground Floor Engineering. At Ground Floor we had offices in China, India and the US, the majority of our work was built in the US, Caribbean, India and China. My responsibilities were to build and oversee all of the Architectural production in the office and to oversee the development of the documents from Concept thru CD's and CA. I was also responsible for generating, checking and coordinating all specifications on most project types. I managed all Architectural staff, oversaw all drawings and implemented QA/QC standards. Prior to Ground Floor I worked at The Scott Partnership in Orlando as a Managing Partner. At Scott Partnership I oversaw the Office/Religion/Industrial studios and managed between 10-15 team members. I was responsible for implementing and maintaining office QC/QA/Standards. I was also instrumental in increasing gross fees from \$2.2 million to \$18 million in 6 years by employing a client based business/marketing strategy as apposed to purely market based strategy, (each studio head is responsible for their own clients.) As a partner I helped the firm grow from 2 division, 22 person to 5 division, 100 person firm, expanding to include national and international clientele. I worked closely with Developer/ REIT/ Property Manager type clients. Most of my experience is in the Commercial sector, Office, retail, Education, Religious, Hospitality and Hotel.

I am registered in the state of Florida and I am NCARB certified, so that I can become registered in additional states as needed. I am a member of AIA, American Institute of Architects. I am in the process of studying LEEDS and will schedule to take that exam first quarter 2009. I have had the opportunity to work very closely with the Structural, MEP/ FP Engineers on all projects. This has given me the insight and skills to offer the client a much more integrated architectural product.

I am looking for a position where I can guide and manage a group of professionals and add a great value to the firm. My skills include supervising/managing the production of documents to ensure that a great product is produced. I also excel at SMEP design, discussion, and coordination. I can work as a producer of new work and am very comfortable working to foster and maintain great client relationships. I look forward to being challenged.

Thank you for your consideration,

A handwritten signature in black ink, appearing to read 'T. Aebie', written in a cursive style.
